

GLOBE EXERCISE

Crisis Management Game: Experience virtual collaboration in international staff organisations!

What is GLOBE?

GLOBE is a mix of a traditional simulation game and crisis management exercise where students virtually navigate through a simulated United Nations conflict scenario in the Sahel region. Students will be familiarised with the tasks, requirements and challenges of working within complex, multinational staff organisations and gain knowledge in the complexities of the Sahel crisis.

Through interaction with students from international partner universities and practitioners and experts from international, military and humanitarian organizations, students expand their professional skills and network. Joining GLOBE also provides valuable insights in how to design, prepare, conduct and evaluate such exercises. The reference to applied politics, international relations and leadership becomes easier and thus realistically prepares for the future work environment. Simulation games like GLOBE are a practical and well-established training tool for international actors in the field of foreign, development or security policy, but also for international businesses.
