

Introduction to Informatics

This course aims at providing a general knowledge of computers and IT to 1st year undergraduate students. No previous experience is required for students since lessons are structured to delivering step-by-step information and to allow students to learn through hands-on methods. The course is divided into theory lessons and practical ones. During theory sessions, basics of computers, internet, hardware, and software are explored, using different teaching methods to enable student participation. Similarly, practical sessions are delivered in a step-by-step tutorial form, to allow students to learn from the basics. Software taught: Microsoft Word, Microsoft PowerPoint, and Microsoft Excel, all freely available for enrolled students through HMU IT services.
